

HEALTH TECHNOLOGY ASSESSMENT ANALYST

AXIS Healthcare Consulting Ltd was founded in 2012 to provide high quality and tailored Pricing, Reimbursement and Market Access (PRMA) services to clients. The Company's head office is located in Dublin, Ireland with a second office in Galway. AXIS has recently launched its UK business with an office now opened in Glasgow, Scotland.

AXIS is the largest PRMA Consultancy in Ireland and the recognised leader within the international and national marketplace for its insights, expertise and success having delivered 77+ high quality and customised submissions to the Irish authorities. The culture at AXIS is underpinned by a passion for success coupled with a deep commitment to working in partnership with each client to achieve high-quality outputs. The successful candidate would be joining a fast-past dynamic team with a range of expertise including health economists, statisticians, medical writers and market access experts.

The Company is now seeking to expand its growing team of technical specialists and wishes to appoint a new **Health Technology Assessment (HTA) Analyst**.

The main responsibilities of the role involve supporting the development of robust, comprehensive and compelling HTA dossiers to relevant agencies in Ireland & Scotland.

Job Type: Full time, Permanent position.

Location: Employee will be based at either one of our three offices (Dublin, Galway or Glasgow) with home working arrangements also available.

Salary: A competitive salary along with an annual company bonus, life assurance scheme, company pension scheme, employee assistance programme, annual wellbeing allowance as well as a generous annual leave package are available to the right candidate. We also offer ongoing personal and professional development as well as other benefits including attendance at conferences and opportunities to publish research.

Role and Responsibilities

The successful candidate will:

- source data inputs for various decision support models.
- conduct recalibrations of various models including Markov cohort, partitioned survival and budget impact models for submissions to HTA bodies in Ireland and Scotland.
- working with the HTA Managers, analyse and interpret the output to various model adaptations conducted.
- present results of analyses to clients.
- develop written summaries of analyses conducted and results obtained.
- effectively communicate trends, patterns, and predictions across the reimbursement landscapes using relevant data.
- conduct desk research to support the development of research projects across the business.
- support all colleagues on the team to deliver high-quality project outputs.

Essential

- MSc in Health Economics, Public Health, Operations Research, Epidemiology or a related discipline.
- Understanding of HTA methodologies and processes.
- Strong technical skill set including excellent skills in Excel and/or R.
- Strong analytical skills coupled with rigorous attention to detail.
- An ability to multi task while completing each task to company standard.
- A high level of self-organisation and self-motivation.
- Excellent communication (both written and verbal) skills and proven ability to communicate technical information to various audiences.
- Demonstrable commitment to learn and an ability to work autonomously with a problem-solving approach.
- Excellent work ethic and integrity.
- Verbal and written proficiency in English language.

Highly Desirable

- Prior HTA experience (6 months min.) in consultancy, academia or Pharma industry.
- Experience of navigating through the Irish or Scottish HTA assessment process.
- An up to date and thorough understanding of the Irish and UK healthcare sector.
